Abet takes care about the environment.

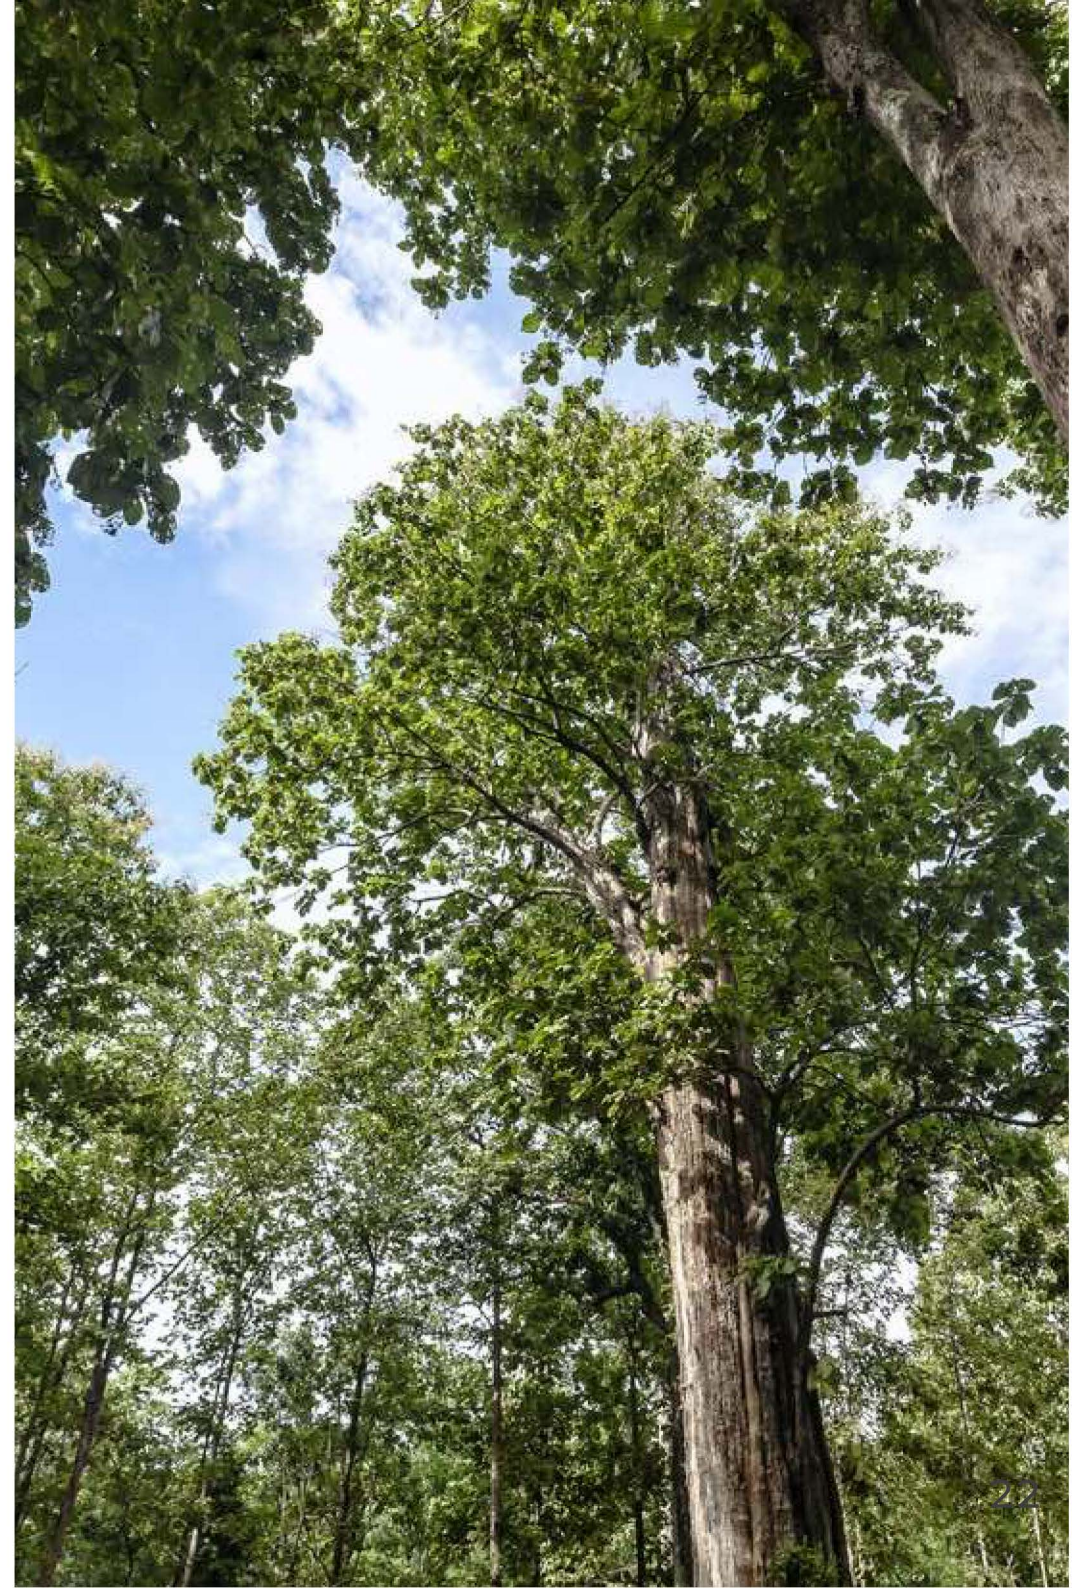

Laminate is consists of about 70% cellulose fibres and about 30% thermosetting resins.

It is not classified as dangerous material and it is not compulsory to issue any safety data sheet.

The environmental impacts of the product, along the life cycle from cradle-to-grave, were calculated through the LCA study and published through the EPD Print HPL Thin and Print HPL Compact, certified statement by the third party.

Given its high calorific value, Print HPL laminates can be used for energy recovery in waste-to-energy plants.

For further information, please have a look at the GoGreen brochure on abet-laminati.com website.
