ANTIMICROBIAL LAMINATE

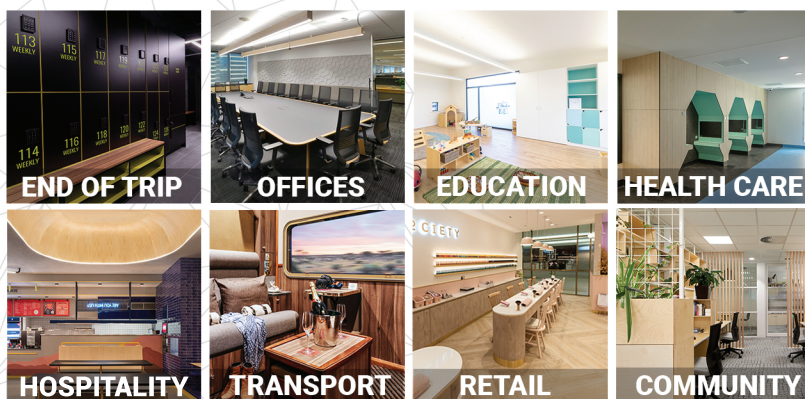

Lamishield is the antimicrobial HPL produced by Abet Laminati. Thanks to its antimicrobial protection, fully incorporated into the decorative layer, Lamishield, in conjunction with good hygiene and cleaning practice, can reduce the risk of cross contamination.

BioCote®

Abet Laminati has chosen BioCote®, the leading provider of proven antimicrobial technology to companies around the globe. BioCote® technology uses Silver's properties to provide continuous integrated antimicrobial activity to the surface of Lamishield. BioCote® technology does not affect normal HPL performances or its appearance. BioCote® complies with the mandatory biocide regulations and is registered for foodstuff contact by EFSA (European Food Safety Authority) and is approved by the FDA (Food and Drug Administration).

ISO 22196:2011

Laboratory tests performed according to ISO 22196:2011 (Measurement of antibacterial activity on plastics and other non-porous surfaces), prove that Lamishield protected by BioCote® reduces the level of bacteria by up to 99.9%. Lamishield is also subjected to a regular quality control plan aimed at ensuring the performance levels of its properties. Lamishield is suitable for applications used regularly by the public such as hospitals, schools, transport and libraries.

UP TO

99.9%

Bacteria
Reduction

- ✓ Escherichia coli
- ✓ Methicillin-Resistant Staphylococcus aureus (MRSA)

Colours

Lamishield can be manufactured in the below colour range. Contact us on 1300 722 113 or visit www.surfacesquared.com.au for a complete set of samples or to discuss your next project.
