

REASONS TO CHOOSE PANELTIM®

LIGHT

Thanks to their hollow cell structure, Paneltim® panels are very light, while retaining their sturdiness and rigidity. This not only facilitates the processing of the panels, but also lowers the costs of transport and installation.

STRONG

Thanks to their internal cell structure, Paneltim® panels are extremely strong. The cells ensure that the panels have excellent bending resistance in all directions.

HYGIENIC

Paneltim® panels are resistant to many chemicals, repel dirt and are easy to clean with a high-pressure cleaner. Thanks to the closed cell structure, dirt has no chance to penetrate into the panels.

SIMPLE PROCESSING

Standard Paneltim® panels can be processed to all desired dimensions thanks to different welding techniques or mechanical connections. The panels are also easily processable with traditional actions such as sawing, drilling, screwing ...

100% RECYCLABLE

Paneltim® panels are 100% recyclable. They are free of toxic substances.

DID YOU KNOW THAT PANELTIM® PANELS...

...OFFER ENORMOUS FLEXIBILITY?

The panels are welded together quickly and easily so that any desired dimension can be created. Both in the workplace and on site.

...ARE INSULATED?

Paneltim® panels are filled with air on the inside and therefore perform well in terms of thermal insulation in comparison with similar products. Air has a high thermal resistance. This insulation effect can be compared with the principle of a cavity wall or double glazing.

...ARE ALSO AVAILABLE WITH UV STABILISERS?

Paneltim® prime quality panels are always UV-stabilised and can be used outdoors.

We always recommend using light colors with UV stabilization for outdoor applications.
